Alumina laser marking machine is a laser marking device specially used for high-precision marking on the surface of alumina materials. Through the high energy density of the laser beam, the laser marking machine can remove a layer of oxide film on the surface of the alumina, producing a dark mark or pattern. This marking method does not require the use of any chemicals or inks, and can achieve clear, durable and high-contrast marking effects. Alumina laser marking machines are widely used in electronics, aerospace, automobiles, medical equipment and other fields, especially for marking needs that require wear resistance, high temperature resistance and anti-counterfeiting.
