Abstracts

The global Alumina Slurry market size is expected to reach \$ 1627 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

Alumina slurry is a stable and dispersed slurry material made mainly of alumina powder as a solid component, combined with water, solvents, dispersants, binders, pH adjusters, rheological agents, and other functional additives. Its core function is to apply alumina particles in a processable, coatable, polishable, or formable state to downstream processes. According to different purposes, alumina slurry can be divided into CMP alumina slurry, precision polished alumina slurry, metallographic sample alumina slurry, sapphire and SiC polished alumina slurry, ceramic formed alumina slurry, electronic ceramic alumina slurry, battery separator coated alumina slurry, etc. Its key performance includes alumina purity, particle size distribution, particle morphology, solid content, dispersion stability, viscosity, pH value, metal impurity content, agglomerated particle control, and batch consistency. It is widely used in fields such as semiconductor polishing, sapphire processing, silicon carbide wafers, optical materials, metallographic sampling, electronic ceramics, ceramic substrates, lithium battery separator coating, wear-resistant coatings, and precision ceramic forming. In 2025, global Alumina Slurry production reached approximately 204.63 K MT, with an average global market price of around US\$ 5,082 per MT.

Alumina slurry is a cross product of precision inorganic materials and functional slurries, with demand mainly coming from fields such as semiconductor CMP, SiC and sapphire polishing, metallographic sampling, electronic ceramics, ceramic 3D printing, lithium battery separator coating, and functional coatings. Among them, battery separator coating and ceramic molding contribute significantly to sales, CMP? Sapphire, SiC, and high-purity electronic grade pastes contribute to higher unit prices and profits. With the

increasing demand for SiC power semiconductors, GaN devices, sapphire optical windows, advanced packaging, ceramic substrates, MLCC, and lithium battery safety separators, the alumina slurry market still has stable expansion space. The future market opportunities mainly focus on semiconductor grade low defect CMP alumina slurry, SiC wafer high removal rate low scratch slurry, sapphire high-efficiency polishing slurry, lithium battery separator ceramic coating slurry, high solid content low viscosity ceramic forming slurry, nano alumina dispersion slurry, and high-purity low impurity alumina slurry for electronic ceramics.
