Abstracts

The global Alumina Trihydrate market size is expected to reach \$ 2057.9 million by 2029, rising at a market growth of 3.5% CAGR during the forecast period (2023-2029).

Global key players of Alumina Trihydrate include Huber, Nabaltec and CHALCO, etc. The top three players hold a share over 40%. China is the largest market, has a share about 34%. In terms of product type, Standard Alumina Trihydrate is the largest segment, occupied for a share of about 56%, and in terms of application, Polyester Resins Filler has a share about 36 percent.

Alumina trihydrate is produced synthetically from bauxite. The outstanding features of aluminium hydroxide are flame retardance (dehydration at 200°C), high whiteness and low hardness. Alumina trihydrate is regarded as being the most important mineral flame retardant in the world and, thanks to its freedom from halogens, it is environmentally friendly and is characterized by its high efficiency as a smoke gas suppressant. This mineral is made from bauxite in accordance with the Bayer process.
