According to our (Global Info Research) latest study, the global Aluminium Cable Tray Systems market size was valued at USD 757.7 million in 2023 and is forecast to a readjusted size of USD 1211.1 million by 2030 with a CAGR of 6.9% during review period.

In the electrical wiring of buildings, a cable tray system is used to support insulated electrical cables used for power distribution, control, and communication. Aluminum cable trays are widely known for their lightweight and durable nature. Their low weight makes them easy to install, reducing both labor and transportation costs. Being non-magnetic, aluminum trays are particularly useful in areas where electromagnetic interference may cause issues. They are also naturally resistant to corrosion, thanks to the formation of a protective oxide layer on their surface. This quality makes them suitable for outdoor applications, as they can withstand harsh weather conditions, including UV radiation. Additionally, aluminum cable trays often have a smooth and aesthetic finish, making them a visually appealing choice for many installations.
