Abstracts

According to our (Global Info Research) latest study, the global Aluminium Dross Recycling market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

This report mainly studies aluminium dross recycling market. Aluminium dross, a by-product of the aluminium smelting process, can be mechanically recycled to separate the residual aluminium metal from the aluminium oxide. The purpose of recycling: 1. To reduce metal content in waste; 2. To reduce energy usage in aluminium production; 3. To reduce fluoride emissions in aluminium production; 4. To increase global aluminium UBC recycling targets. Due to the variety of aluminium dross and the large difference in chemical composition, aluminum enterprises often lack technology and equipment, resulting in some of them being treated as ordinary garbage (dumping or landfill) or being hoarding in warehouses. Although various countries have formulated a series of recycling station policies, the current recycling work has not achieved the expected goals.
