## Abstracts

According to our (Global Info Research) latest study, the global Aluminium Oxide Copper market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Aluminum oxide copper ( $\text{CuAl}_2\text{O}_3$ ), also known as dispersion strengthened copper. It has a long service life, high spot welding frequency, and an electrode life that is more than 5 times that of ordinary chromium zirconium copper, reducing the time for stopping work and grinding electrodes, and improving the efficiency of automatic welding production lines. Aluminum oxide copper is an excellent electrode material with excellent strength, softening temperature, and conductivity. It is particularly prominent for welding galvanized sheets (electrolytic plates). It does not produce electrode to workpiece adhesion like chromium zirconium copper electrodes, and does not require frequent polishing. It effectively solves the problem of welding galvanized sheets, improves efficiency, and reduces production costs. Aluminum oxide copper electrodes have excellent welding performance, but their current cost is very expensive, so they cannot be widely used at present. Due to the widespread application of galvanized sheet metal, the excellent performance of aluminum oxide copper in welding galvanized sheet metal makes its market prospects extremely broad.
