Aluminum alloy for automotive refers to a group of lightweight aluminum-based materials specifically engineered for use in vehicle manufacturing to reduce weight, improve fuel efficiency, and enhance performance and safety. These alloys are widely used in body structures, chassis components, powertrain housings, and electric vehicle battery systems due to their high strength-to-weight ratio, good corrosion resistance, excellent castability and formability, and recyclability. Automotive aluminum alloys are typically tailored for processes such as die casting, extrusion, rolling, and forging, supporting both conventional vehicles and next-generation electric and lightweight vehicle platforms.

The Aluminum Alloy for Automotive market refers to the global market for aluminum-based materials used in the manufacturing of vehicle components to achieve lightweighting, energy efficiency, and emission reduction. Automotive aluminum alloys are widely applied in body structures, chassis systems, powertrain components, and electric vehicle battery enclosures, replacing traditional steel to improve fuel economy and driving range. Market growth is driven by stringent emission regulations, rapid

electrification of vehicles, and the adoption of advanced manufacturing technologies such as high-pressure die casting and giga-casting, with major demand coming from passenger vehicles, electric vehicles, and commercial vehicles across North America, Europe, and Asia-Pacific.
