Aluminum alloy cathode is a cathode device made of aluminum alloy material, which is widely used in electrochemical applications, especially in the fields of electrolysis and electroplating. As a cathode, it has the function of receiving electrons in the electrolysis process and undergoing a reduction reaction. Compared with pure aluminum cathode, aluminum alloy cathode has higher strength, corrosion resistance and electrochemical stability, because other metal elements such as magnesium, zinc, copper, etc. are added to aluminum alloy to improve its mechanical properties and durability.
