## Abstracts

According to our (Global Info Research) latest study, the global Aluminum Alloy Scroll market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Aluminum alloy scroll is a turbocharger made of lightweight aluminum alloy material, which is used in the supercharging system of automobile engine. Compared with traditional turbochargers, aluminum alloy scrolls have higher thermal conductivity and mechanical strength, and can more effectively withstand high temperature and high pressure working environments. Due to the better thermal conductivity of the aluminum alloy, the response speed of the vortex is faster, providing a more sensitive power response for the engine.
