## Abstracts

The global Aluminum Alloy Scroll market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Aluminum alloy scroll is a turbocharger made of lightweight aluminum alloy material, which is used in the supercharging system of automobile engine. Compared with traditional turbochargers, aluminum alloy scrolls have higher thermal conductivity and mechanical strength, and can more effectively withstand high temperature and high pressure working environments. Due to the better thermal conductivity of the aluminum alloy, the response speed of the vortex is faster, providing a more sensitive power response for the engine.
