Abstracts

According to our (Global Info Research) latest study, the global Aluminum-Based Flux-Cored Solder market size was valued at US\$ 18.59 million in 2025 and is forecast to a readjusted size of US\$ 24.33 million by 2032 with a CAGR of 3.9% during review period.

Aluminum-based flux-cored brazing filler metal is a composite brazing material with an aluminum-silicon alloy outer sheath and a fluoride flux filling core. During brazing, the flux core melts and releases the flux, removing the oxide film on the aluminum surface and improving wettability, achieving efficient joining of aluminum and aluminum alloys. It features no need for post-weld cleaning, ease of operation, and high joint strength, and is widely used in refrigeration, automotive heat exchangers, and aerospace industries.

Upstream industries mainly include suppliers of raw materials such as aluminum-silicon alloys and fluoroaluminate fluxes, involving precision machining technologies such as continuous casting, isothermal extrusion, and roll drawing. Downstream industries cover refrigeration and air conditioning (aluminum radiators, condenser tubes), automotive manufacturing (heat exchangers), power appliances, motors and transformers, and aerospace, selling through welding material distributors and industrial product channels, serving flame brazing, induction brazing, and furnace brazing scenarios for aluminum and aluminum alloys. The global price of aluminum-based flux-cored brazing filler metal is US\$12,030/ton, with annual sales of approximately 1,502 tons, global production capacity of 1,800 tons, and an industry profit margin of 18%.
