According to our (Global Info Research) latest study, the global Aluminum Busbar for Electric Vehicle market size was valued at USD 398.2 million in 2022 and is forecast to a readjusted size of USD 1275.1 million by 2029 with a CAGR of 18.1% during review period.

Aluminum busbars are attractive for the battery cell connection because they provide reliable electrical performance while helping to save total battery pack weight since aluminum busbars are typically 50% lighter than copper busbars. For equivalent electrical/thermal performance, however, the cross-section of an aluminum busbar will be greater than that of a copper busbar with, for example, a 1-mm copper conductor replacing a 2-mm aluminum conductor. Copper busbars offer excellent solutions where space is tight, while aluminum busbars enable efficient energy distribution with weight savings compared to copper. Aluminum is also less costly than copper.
