Abstracts

The global Aluminum Busbar for Electric Vehicle market size is expected to reach \$ 1275.1 million by 2029, rising at a market growth of 18.1% CAGR during the forecast period (2023-2029).

Aluminum busbars are attractive for the battery cell connection because they provide reliable electrical performance while helping to save total battery pack weight since aluminum busbars are typically 50% lighter than copper busbars. For equivalent electrical/thermal performance, however, the cross-section of an aluminum busbar will be greater than that of a copper busbar with, for example, a 1-mm copper conductor replacing a 2-mm aluminum conductor. Copper busbars offer excellent solutions where space is tight, while aluminum busbars enable efficient energy distribution with weight savings compared to copper. Aluminum is also less costly than copper.

This report studies the global Aluminum Busbar for Electric Vehicle production, demand, key manufacturers, and key regions.
