According to our (Global Info Research) latest study, the global Aluminum Cable Cleats market size was valued at USD 185.6 million in 2023 and is forecast to a readjusted size of USD 239.7 million by 2030 with a CAGR of 3.7% during review period.

Cable cleat is a cable management product used to support and hold cables when installed at intervals along the length of cables. These are useful in ensuring long life of cables as they reduce damage caused to the cables due to their own weight. Cable cleats have been useful in applications having heavy cables, power lines and transportation infrastructure. In 2003, the standard of cable cleats for electrical installations, EN 50368, was published, and in 2009, IEC 61914 was published. Since then, cable cleats manufacturers are producing their products under the same standard.
