## Abstracts

The global Aluminum Chlorohydrate (ACH) market size is expected to reach \$ 63.07 million by 2032, rising at a market growth of 3.0% CAGR during the forecast period (2026-2032).

Global sales of Aluminum Chlorohydrate (ACH) was about 97200 tons in 2024 with average price of 510 USD/ton.

Bauxite, hydrochloric acid are the basic raw materials of the product. Water treatment is the largest consumption field of Aluminum Chlorohydrate (ACH).

The average gross margin of the industry ranges from 15%-20%.

Aluminum Chlorohydrate (ACH) is a high basicity, highly polymerized coagulant that has little effect on alkalinity and pH and is ideal for treating low alkalinity source waters. Due to its higher ion activity, ACH can generally be dosed at lower feed rates reducing sludge generation. ACH is also used as an additive in a broad range of industrial manufacturing applications where higher levels of aluminum (aluminum ion) are required.

The Aluminum Chlorohydrate market is medium-sized, with demand dominated by drinking water, municipal wastewater, and industrial water treatment, where Asia-Pacific, North America, and Europe are the key consuming regions served by a mix of global water-chemicals majors and numerous regional producers.

Driven by tightening water-quality regulations, ongoing urbanization, and upgrading personal-care consumption, high-basicity and high-purity ACH grades are gaining

share, and the industry is shifting from volume-driven growth to steady, value-added expansion.

The sector is challenged by volatility in raw-material and energy costs, increasingly stringent drinking-water and cosmetic regulations, and competition from alternative treatment technologies (iron-based coagulants, organic flocculants, and membrane processes), requiring producers to differentiate via process efficiency, regulatory compliance, and strong application support.

This report studies the global Aluminum Chlorohydrate (ACH) production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Aluminum Chlorohydrate (ACH) and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Aluminum Chlorohydrate (ACH) that contribute to its increasing demand across many markets.
