According to our (Global Info Research) latest study, the global Aluminum Chromium Alloy market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Aluminum-chromium alloy is an important electrothermal alloy. Due to the large amount of Cr and Al in the composition, a dense oxide film will be formed on the surface of the alloy at high temperature, thereby prolonging the service life of the alloy material. High Al content can also increase resistivity, effectively convert electrical energy into heat energy, and save electrothermal materials. Aluminum-chromium alloy has high-temperature oxidation and high resistivity, and can be widely used in high-temperature gas filtration, burners, gas sealing, etc.
