Abstracts

The global Aluminum Chromium Alloy market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Aluminum-chromium alloy is an important electrothermal alloy. Due to the large amount of Cr and Al in the composition, a dense oxide film will be formed on the surface of the alloy at high temperature, thereby prolonging the service life of the alloy material. High Al content can also increase resistivity, effectively convert electrical energy into heat energy, and save electrothermal materials. Aluminum-chromium alloy has high-temperature oxidation and high resistivity, and can be widely used in high-temperature gas filtration, burners, gas sealing, etc.

This report studies the global Aluminum Chromium Alloy production, demand, key manufacturers, and key regions.
