According to our (Global Info Research) latest study, the global Aluminum Cookware market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Aluminum cookware is fairly inexpensive in comparison to cookware made from other materials. Aluminum is lightweight but fairly strong. It is a good conductor of heat and does not easily distort when exposed to high temperatures. Aluminum works well for saut?ing and frying foods because of its heat responsiveness. The drawback of aluminum is that it reacts to acidic and alkaline foods, causing it to corrode and affect the taste of the food being cook. Aluminum is generally used as a core heat conductor, or coated with stainless steel or an anodized coating to protect the food.

In Europe, Aluminum Cookware key players include SEB, Alluflon, Illa SpA, Ballarini, Norbert Woll GmbH, etc. Europe top five manufacturers hold a share over 50%. France is the largest market, with a share over 20%.
