An aluminum crucible preheater is an industrial heating system designed to uniformly preheat aluminum crucibles prior to molten metal charging, reducing thermal shock, extending crucible service life, and improving melting efficiency. These systems typically employ gas-fired burners or electric heating elements with controlled temperature ramps and safety interlocks. In 2025, the average selling price of aluminum crucible preheaters is approximately US\$18,500 per unit, with global sales volume estimated at around 21.6 thousand units. The market is characterized by project-based equipment sales, close integration with aluminum melting operations, and growing adoption driven by energy efficiency and equipment longevity considerations.
