Abstracts

Aluminum curtain wall is a modular frame assembly arranged side-by-side and top-to-bottom interlocked relation. It has improved four corner joint construction providing more than adequate weather tightness. Alignment is provided for structurally connecting lower head rails in axially aligned relation. Aluminum curtain wall contains filler strip and lap strip that cooperate with the alignment to seal a gap and space presented between adjacent interlocked head and sill rails, thereby providing weathertight four corner joint. Curtain walls consist of panels made up of different materials such as glass and metal. Metal curtain walls with aluminum panels are called aluminum curtain walls.
