Abstracts

According to our (Global Info Research) latest study, the global Aluminum Curtain Walls market size was valued at USD 12710 million in 2023 and is forecast to a readjusted size of USD 14810 million by 2030 with a CAGR of 2.2% during review period.

A curtain wall is defined as thin, usually aluminum-framed wall, containing in-fills of glass, metal panels, or thin stone. The framing is attached to the building structure and does not carry the floor or roof loads of the building. The wind and gravity loads of the curtain wall are transferred to the building structure, typically at the floor line. Aluminum framed wall systems date back to the 1930's, and developed rapidly after World War II when the supply of aluminum became available for non-military use.

Curtain wall systems range from manufacturer's standard catalog systems to specialized custom walls. Custom walls become cost competitive with standard systems as the wall area increases. This section incorporates comments about standard and custom systems. It is recommended that consultants be hired with an expertise in custom curtain wall design for projects that incorporate these systems.

In this report, Aluminum Curtain Wall System mainly refers to the Curtain Wall System with aluminum-framed wall.

Schuco is the leading company in the European aluminum curtain wall system market, but only has a total market share of less than 10%. In terms of type, stick built type occupies an important share of more than 70%. In terms of application, commercial building accounts for 70%.
