The global Aluminum Diaphragm Pump With Cataphoresis Treatment market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

An aluminum diaphragm pump with cataphoresis treatment features an aluminum diaphragm coated through cataphoresis, an electrochemical process. This enhances corrosion resistance, durability, and chemical resistance, making it suitable for demanding industrial applications like fluid transfer. The aluminum construction ensures lightweight properties, while the cataphoresis treatment adds a protective layer, extending the pump's lifespan and enabling it to handle a broader range of fluids. This combination makes the pump reliable in corrosive environments, such as those found in chemical processing and agricultural settings, offering efficient and durable fluid handling solutions.
