Abstracts

The global Aluminum-doped Cobalt Tetroxide market size is expected to reach \$ 4897 million by 2032, rising at a market growth of 9.0% CAGR during the forecast period (2026-2032).

Aluminum-doped Cobalt Tetroxide (Al-doped Co_2O_3) is a modified Co_2O_3 material in which aluminum ions partially substitute cobalt ions or occupy lattice vacancies. This doping adjusts the material's electrical, magnetic, and catalytic properties. It is commonly applied in electrochemical, electrocatalytic, and high-temperature stable applications, with the doping level directly affecting crystal structure, conductivity, and active site distribution.

In 2025, global production of aluminum-doped cobalt tetroxide (Al-doped Co_2O_3) reached 97 k tons, with an average selling price of USD 27 per kilogram. Total installed capacity was approximately 150,000 tons, and the industry gross margin was around 10%–20%. The cost structure consisted of about 95% direct materials, 4% manufacturing overhead, and 1% labor costs. In the industry value chain, upstream players include cobalt chloride raw material suppliers, while downstream users are lithium cobalt oxide materials and lithium battery manufacturers.

This report studies the global Aluminum-doped Cobalt Tetroxide production, demand, key manufacturers, and key regions.
