Abstracts

The global Aluminum DRD Cans market size is expected to reach \$ 6059 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032). Global sales of Aluminum DRD Cans was about 51 billion units in 2025 with average price of 0.09 USD/Unit. The average gross margin of the industry is between 15%-20%.

Aluminum DRD Cans are two-piece aluminum cans produced by the draw-and-redraw (DRD) process. In this process, a pre-coated or pre-printed aluminum sheet is first drawn into a cup and then redrawn to reach the required final dimensions. The can body and bottom are formed as one integral piece, and only the top end is added later by seaming. Compared with draw-and-wall-ironed cans, Aluminum DRD cans are shaped mainly through redrawing rather than extensive wall ironing, and they are widely used for food packaging where strength, shape flexibility, and product protection are important.

This report studies the global Aluminum DRD Cans production, demand, key manufacturers, and key regions.
