According to our (Global Info Research) latest study, the global Aluminum Electrolytic Capacitors market size was valued at USD 7291.6 million in 2023 and is forecast to a readjusted size of USD 8660.4 million by 2030 with a CAGR of 2.5% during review period.

An aluminum electrolytic capacitor, usually simply called an electrolytic capacitor (e-cap), is a capacitor whose anode (+) consists of pure aluminum foil with an etched surface, covered with a uniformly very thin barrier layer of insulating aluminum oxide, which operates as a dielectric. The electrolyte, which covers the rough surface of the oxide layer, operates as the second electrode, the cathode (-). E-caps have the largest capacitance values per unit volume compared to the two other main conventional capacitor families, ceramic and plastic film capacitors, but articulately smaller capacitance than similar sized supercapacitors.

Globally, the aluminum electrolytic capacitors industry market is concentrated. The top five manufacturers have more than 50% of the market share And some enterprises, like Nippon Chemi-Con, Nichicon and Rubycon etc. are well-known for the wonderful performance of their aluminum electrolytic capacitors and related services. The manufacturers in Japan are dominated in the high-end market while in the low-end market, the manufacturers in China are competitive and they have much higher volume shipment.
