Abstracts

The global Aluminum Extruded Heat Sink market size is expected to reach \$ 1255 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

In 2025, global Aluminum Extruded Heat Sink production reached approximately 153,600 k units with an average global market price of around US\$ 7.5 per unit, and a gross profit margin of approximately 10%-30%. Aluminum Extruded Heat Sinks are passive thermal management components produced by pushing aluminum billets through precision dies to form finned profiles that dissipate heat into ambient air. The extrusion process enables cost-effective mass production, consistent geometry, and good thermal conductivity, while allowing different fin heights, spacing, and base thickness for various heat loads. After extrusion, heat sinks are often cut, CNC-machined, drilled, and surface-treated such as anodizing to improve corrosion resistance and emissivity. They are widely used in power supplies, inverters, LED lighting, motor drives, telecom equipment, and industrial electronics. The industrial chain of Aluminum Extruded Heat Sinks includes upstream aluminum billets and alloying inputs, extrusion dies, extrusion presses, cutting tools, machining consumables, surface-treatment chemicals, and thermal interface materials. Midstream processes cover extrusion forming, straightening, cutting, deburring, CNC machining, tapping and drilling, anodizing or coating, inspection, and packaging. Downstream applications include electronics OEMs and integrators in power conversion, LED fixtures, telecom, automation, energy storage, and EV charging equipment. Supporting services include thermal design, prototyping, reliability testing, and customized assembly with fans, brackets, or heat spreaders.
