Abstracts

The global Aluminum Extruded Products market size is expected to reach \$ 111810 million by 2032, rising at a market growth of 3.3% CAGR during the forecast period (2026-2032).

Aluminum Extrusion is a plastic deformation process in which a solid cylinder of aluminum (billet) is forced by compression through a smaller die opening. The billet is typically preheated to facilitate the deformation process.

Aluminum extrusion is a technique used to transform aluminum alloy into objects with a definitive cross-sectional profile for a wide range of uses. The extrusion process makes the most of aluminum's unique combination of physical characteristics. Its malleability allows it to be easily machined and cast, and yet aluminum is one third the density and stiffness of steel so the resulting products offer strength and stability, particularly when alloyed with other metals.

Global Aluminum Extruded Products key players include Sapa AS, China Zhongwang, Aluminum Corporation of China, Alcoa, Constellium, etc. Global top 3 manufacturers hold a share about 16%.

In terms of product type, Cold Extrusion is the largest segment, with a share of 58%. And in terms of application, Construction has a share about 53 percent.

This report studies the global Aluminum Extruded Products production, demand, key manufacturers, and key regions.
