Three Heads Double Rails Puller is an automated equipment used in the production of aluminium profiles. It works collaborally on the double rails through two sets of puller heads and a set of synchronous saws to achieve efficient traction and cutting of aluminium profiles. This equipment can provide stable tension during the extrusion process of aluminum profiles, ensuring that the profiles are pulled out in a straight line and avoiding deformation. At the same time, it improves production efficiency and yield through automated control, and is suitable for high-output and high-quality aluminum profile production scenarios.
