According to our (Global Info Research) latest study, the global Aluminum Extrusion Equipment market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Aluminum Extrusion Equipment is a power device for extrusion profile forming. Aluminum extrusion is the process of forcing aluminum alloy material through a die with a specific cross-sectional profile. A powerful punch pushes the aluminum through the die, and the aluminum comes out of the die opening. When it does, it emerges in the same shape as the mold and is pulled along the output table.
