## Abstracts

The global Aluminum Extrusion Equipment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Aluminum Extrusion Equipment is a power device for extrusion profile forming. Aluminum extrusion is the process of forcing aluminum alloy material through a die with a specific cross-sectional profile. A powerful punch pushes the aluminum through the die, and the aluminum comes out of the die opening. When it does, it emerges in the same shape as the mold and is pulled along the output table.

This report studies the global Aluminum Extrusion Equipment production, demand, key manufacturers, and key regions.
