According to our (Global Info Research) latest study, the global Aluminum Intake Manifold market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The Aluminum Intake Manifold is a piping system that connects the engine to the air filter. Its main function is to direct air into the engine combustion chamber, providing enough oxygen so that the fuel can be completely burned. Aluminum intake manifolds are generally lighter, stronger and more corrosion-resistant than cast iron manifolds, so they are widely used in high-performance engines and sports cars to increase engine power and performance. At the same time, the aluminum intake manifold can also reduce the overall weight of the vehicle and improve fuel economy.
