Abstracts

The global Aluminum Intake Manifold market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The Aluminum Intake Manifold is a piping system that connects the engine to the air filter. Its main function is to direct air into the engine combustion chamber, providing enough oxygen so that the fuel can be completely burned. Aluminum intake manifolds are generally lighter, stronger and more corrosion-resistant than cast iron manifolds, so they are widely used in high-performance engines and sports cars to increase engine power and performance. At the same time, the aluminum intake manifold can also reduce the overall weight of the vehicle and improve fuel economy.

This report studies the global Aluminum Intake Manifold production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Aluminum Intake Manifold, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
