Abstracts

The global Aluminum Matrix Composite market size is expected to reach \$ 830 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

Aluminum Matrix Composites are metal matrix composites in which aluminum or aluminum alloys serve as the continuous metallic matrix, while silicon carbide, boron carbide, alumina, graphite, carbon materials, short fibers, whiskers or particles act as dispersed reinforcements. They are produced through powder metallurgy, melt infiltration, stir casting, squeeze casting, hot pressing, roll bonding, forging or precision machining. In 2025, the global Aluminum Matrix Composite market is estimated at 10,500 tons, with an average ex-works price of USD 50 US\$/kg. The Aluminum Matrix Composite industry chain starts from aluminum ingots, aluminum alloy powders or preforms, silicon carbide powder, alumina powder, boron carbide powder, etc.

The growth of the Aluminum Matrix Composite market is driven by increasing demand from high-end equipment industries for lightweight materials that combine high stiffness, low thermal expansion, high thermal conductivity, wear resistance and special functional properties. Power electronics, satellite communications, aerospace and semiconductor equipment continue to support the use of Al-SiC and graphite-aluminum composites in thermal management applications, while nuclear fuel storage and nuclear safety systems create demand for Al-B₄C neutron absorber materials. Aerospace, defense and high-end industrial equipment also require particle- or fiber-reinforced aluminum matrix composites to replace selected high-density metals or conventional aluminum alloy components. By combining aluminum's low density and machinability with the reinforcement phase's high modulus, wear resistance, low thermal expansion or functional properties, aluminum matrix composites are gaining opportunities in thermal

management components, neutron absorber plates, precision structural parts, wear-resistant components and high-performance forgings. However, the market remains constrained by complex processing, batch-to-batch consistency challenges, long customer qualification cycles, high costs and strong customization requirements, making it a high-value, low-volume, project-based market with significant technical barriers.

This report studies the global Aluminum Matrix Composite production, demand, key manufacturers, and key regions.
