Abstracts

According to our (Global Info Research) latest study, the global Aluminum Molybdate market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Aluminum molybdate, its CAS number is 15123-80-5, chemical formula $Al_2H_6Mo_3O_{12}$, molecular weight 539.88400, Chinese alias molybdenum aluminum oxide. Aluminum molybdate belongs to the compound of $A_2(MO_4)_3$ structure type, in which $A=Y, Sc, In, Al$ and rare earth metals from Ho to Lu, $M=W, Mo$, belongs to the orthorhombic structure crystal system, has a negative volume Thermal expansion coefficient, because the $A_2(MO_4)_3$ structure has relatively large compatibility, it can accommodate +3-valent cations with an ionic radius of 67.5-107.5pm, so it can be changed by changing the type of A ion or forming a different $A_2(MO_4)_3$ structure The solid solution of a type of compound can change the temperature at which the crystal structure type changes from an orthorhombic phase transition to a monoclinic phase, thereby preparing materials with positive, negative, or zero thermal expansion coefficients. It has potential application value in the fields of electronics, optics and micromechanics.
