According to our (Global Info Research) latest study, the global Aluminum-Nickel Catalyst market size was valued at US\$ 541 million in 2025 and is forecast to a readjusted size of US\$ 754 million by 2032 with a CAGR of 4.7% during review period.

Aluminum-Nickel catalyst, commonly known as Raney nickel, is a high-surface-area solid catalyst made from a nickel-aluminum alloy. It is activated by treating the alloy with concentrated sodium hydroxide (NaOH) to leach out the aluminum, leaving behind a porous, active nickel skeleton used primarily for hydrogenating organic compounds, including in pharmaceutical and petroleum industries.

In 2025, global aluminum-nickel catalyst production reached 26,500 tons, with an average selling price of US\$19,828 per ton. Total capacity was approximately 40,000 tons, and the industry's gross profit margin was approximately 15%?25%. Cost structure: direct materials accounted for approximately 90%, manufacturing costs for approximately 9%, and labor costs for approximately 1%. Industry chain: upstream consists of raw materials such as electrolytic nickel and aluminum, while downstream applications are mainly in the organic chemical industry.
