## Abstracts

The global Aluminum PCBs market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Aluminum PCB is a unique metal core copper clad laminate, which is a type of MCPCB. Has excellent thermal conductivity, electrical insulation and processability. Due to their high thermal resistance, they can handle higher density circuits and greater power levels. The base material made of aluminum alloy offers a high level of physical durability, reducing the risk of breakage. In addition to being reasonably cost-effective, aluminum also has a smaller environmental impact compared to other metals.

This report studies the global Aluminum PCBs production, demand, key manufacturers, and key regions.
