The global Aluminum Plastic Film Coating Compound Machine market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Aluminum-plastic film coating and laminating machine is a coating and laminating equipment mainly used to make aluminum-plastic composite film, which is a commonly used packaging material. The working principle of the aluminum-plastic film coating and laminating machine is to process plastic film and aluminum foil through coating, compounding, drying and other processes to form a composite film with moisture-proof, oxygen-proof, light-proof and other properties. The main components of the aluminum-plastic film coating and laminating machine include modules for material unwinding, coating, lamination, and rewinding. The advantages of the aluminum-plastic film coating laminating machine are fast speed, stable temperature, uniform tension, strong lamination, and good product appearance.
