Aluminum Rolling Scaffold Tower is an outstanding piece of equipment specifically engineered for working at heights. Made primarily from aluminum, which is both lightweight and robust, its frame structure is ingeniously designed with multiple aluminum alloy tubes. These tubes, processed through special techniques, possess excellent strength and corrosion resistance. Structurally, it takes on a vertical tower - like form, with horizontal cross - bars and diagonal supports distributed rationally within, interweaving to create a stable mechanical structure. This ensures that the entire scaffold tower has a powerful load - bearing capacity, enabling it to safely support workers and working tools. At the bottom, high - quality rolling wheels are installed. The design of these wheels is unique, allowing the scaffold tower to move nimbly on flat or slightly uneven ground. Moreover, they are equipped with reliable braking devices. When stationary work is required, the wheels can be quickly locked to guarantee safety during the working process.
