An aluminum storm window is a secondary window installed outside or inside of a primary window to enhance the thermal insulation, soundproofing, and weather resistance of a building. These windows are made from aluminum frames that hold glass or acrylic panes and are designed to protect the primary windows from the elements, such as wind, rain, and snow. Their lightweight, durable aluminum frames combined with effective glazing options provide significant benefits in terms of insulation, weather protection, and noise reduction. Whether for residential, commercial, or historic buildings, aluminum storm windows offer a cost-effective way to improve the performance and longevity of primary windows.
