Abstracts

According to our (Global Info Research) latest study, the global Aluminum Welding Ring market size was valued at US\$ 84.52 million in 2025 and is forecast to a readjusted size of US\$ 126 million by 2032 with a CAGR of 5.9% during review period.

Aluminum welding rings are annular welding consumables made primarily of aluminum or aluminum alloys. Pre-fabricated into various forms—such as closed rings, open rings, multi-turn rings, spiral rings, split rings, or precision-machined rings—they are used to join aluminum and aluminum alloy components. They are widely applied in automotive heat exchangers, air conditioners, refrigerators, heat pumps, battery thermal management systems, and power electronics cooling systems. The upstream supply chain primarily includes primary aluminum and ingots; alloying elements such as silicon, zinc, magnesium, and copper; aluminum alloy wire, strip, and tubing; and aluminum brazing fluxes (e.g., fluoroaluminates). The midstream involves alloy melting, ingot casting, extrusion or rolling, wire drawing, annealing, flux-core filling, precision ring winding, stamping or CNC machining, ring opening and sizing, cleaning, composition and dimensional inspection, and packaging. Downstream applications span sectors such as automotive, home appliances, electric motors, aerospace, electronics, and energy.
