According to our (Global Info Research) latest study, the global Aluminum-Wood Composite Windows market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Aluminum-wood composite windows are made of aluminum alloy extruded profiles as the main material for the frame, stiles, and sashes as load-bearing rods (rods that bear and transmit self-weight and load), and the other side is covered with solid wood decoration. The metal properties of the outer aluminum have good moisture-proof and waterproof properties and are not easy to deform; the inner wood is mostly made of Nordic red pine and northeastern larch grown in areas close to the Arctic. The wood surface is sprayed with special paint, which is moisture-proof and anti-corrosive, and the colors are relatively diverse, which can give people a good visual effect. Aluminum-wood composite windows have the composite advantages of both materials and are widely favored by consumers.
