Aluminum zinc plated sheet refers to a type of steel sheet that is coated with a layer of aluminum and zinc, typically using a process similar to galvanizing. The coating generally consists of about 55% aluminum and 43.5% zinc, with a small amount of silicon.

This coating offers excellent corrosion resistance, heat resistance, and a reflective surface, making it ideal for applications in construction, automotive, and appliances. The aluminum component provides a barrier against corrosion, while the zinc helps to enhance the sheet's overall durability. Aluminum zinc plated sheets are often used in environments where moisture and weather exposure are concerns.
