SCOPE OF THE REPORT:

This report studies the Alzheimers Disease Therapeutics market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Alzheimers Disease Therapeutics market by product type and applications/end industries.

Population aging across the globe is a major factor driving the market for Alzheimer's therapeutics and diagnostics. Rising life expectancy is contributing to quick increases in number of aged population, and is associated with increased prevalence of chronic diseases like dementia. Therapies for AD offer temporary and uncertain improvements in the well-being of individuals, and none of the approved drugs can modify the course of the disease advancement. Thus, the magnitude of the affected population and lack of suitable and effective treatment offers an incredible opportunity for drug manufacturers. However, identification of the primary reasons and mechanisms involved in AD are limited. Drug manufacturers have been unable to validate significant clinical benefits of

treatment for a numerous of new compounds due to strict regulations. One of the significant trend observed in this market is collaboration of the existing players. Precisely, diagnostic technology companies are carefully trying to bring about effective biomarker technologies to support and improve the drug development process for potential drug candidates which is further expected to propel the demand. North America dominates the global market for alzheimer?s disease therapeutics due to large number of aging population. Asia followed by the Europe are expected to show high growth rates in the next five years in the global alzheimer?s disease therapeutics market.
