According to our (Global Info Research) latest study, the global Ambient Temperature Capacitance Manometer market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Ambient Temperature Capacitance Manometer is a pressure measuring device based on a capacitive sensor used to measure gas pressure. Capacitive sensors usually consist of parallel electrodes. When gas pressure is applied to the sensor, the capacitance value changes to reflect the pressure level of the gas. Ambient temperature capacitive pressure gauges are designed to provide accurate pressure measurements over the normal ambient temperature range.
