Abstracts

Amblyopia eye patch is an auxiliary medical device used to treat amblyopia. It is usually made of soft material and covers the patient's eye with better normal vision to limit their vision, thereby forcing the patient to use the amblyopic eye for observation and activities, and promoting the visual development of the amblyopic eye. The main function of the amblyopia eye patch is to create a visual imbalance, forcing the patient to rely on the amblyopic eye for observation and activities, thereby promoting the development of the visual function of the amblyopic eye. Its role in the treatment of amblyopia is similar to eye covering therapy, aiming to promote balanced development of the visual system. Amblyopia eye patches are typically designed with comfort and breathability in mind to ensure patient comfort when wearing them, and can be adjusted under the guidance of a physician to meet the patient's specific needs and treatment goals.
