## Abstracts

The global Ambulatory Blood Pressure Monitor market size is expected to reach \$ 141.1 million by 2029, rising at a market growth of 3.1% CAGR during the forecast period (2023-2029).

Global key players of ambulatory blood pressure monitor include Hill-Rom, SunTech Medical, A&D, etc. The top five players hold a share about 70%. North America is the largest market, with a share about 45%, followed by Europe and Asia Pacific with the share about 35% and 15%.

ABPM measures blood pressure at regular intervals (every 15-30 minutes is typical) throughout the day and night. It is especially useful for patients in the following groups: To evaluate suspected white-coat hypertension in patients with hypertension and no target organ damage, apparent drug resistant hypertension, hypotensive symptoms with antihypertensive medications, episodic hypertension, autonomic dysfunction. Because blood pressure is monitored during sleep, ABPM is useful to determine whether the blood pressure falls at night compared to daytime values. A night time fall is normal. Absence of a night time dip is associated with increased cardiovascular disease risk and other endorgan damage. Ambulatory BP monitors are fully automatic and can record BP for 24 hours or longer while patients go about their normal daily activities. Monitors measure about 4 by 3 inches and weigh about 4 lbs. They can be worn on a belt or in a pouch and are connected to a sphygmomanometer cuff on the upper arm by a plastic tube. Patients are asked to keep their arm still while the cuff is inflating and to avoid extreme physical exertion while wearing the monitor. The information can be obtained through ABPM are the true, mean blood pressure; the diurnal rhythm of blood pressure and blood pressure variability.
