According to our (Global Info Research) latest study, the global AMHS for Cleanroom market size was valued at US\$ 3920 million in 2024 and is forecast to a readjusted size of USD 6015 million by 2031 with a CAGR of 6.2% during review period.

This report studies the AMHS for Semiconductor and Flat Panel Display.

Automated material handling systems ensure efficient transport of material from one place to another in the manufacturing area – within the same department or bay, on opposite ends of the manufacturing floor, or even in two separate buildings. An AMHS uses route and process step information provided by the MES to move material using conveyers, vertical elevators, and autonomous vehicles. Identification of material is accomplished using various technologies such as RFID, barcoding, optical character recognition (OCR), near-field communication, or ultra-wide band indoor tracking to detect the location of a material or carrier for transport by the AMHS.

Global key players of AMHS the largest market is Asia-Pacific , and has a share about 74%, followed by North America and Europe with share 16% and 8%, separately. In terms of product type, OHT is the largest segment, accounting for a share of 46%.The global market for semiconductor was estimated at US\$ 526.8 billion in the year 2023, is projected to US\$ 780.7 billion by 2030. IC Manufacturing is the process used to manufacture semiconductor devices, typically integrated circuits (ICs) such as computer processors, microcontrollers, and memory chips (such as NAND flash and DRAM). According to our research, the global semiconductor manufacturing (wafer fabrication) market is projected to grow from US\$ 251.7 billion in 2023 to US\$ 506.5 billion by 2030, at a Compound Annual Growth Rate (CAGR) of 40.49% during the forecast period. This

will drive rapid growth of global semiconductor AMHS.
