According to our (Global Info Research) latest study, the global AMHS Software System market size was valued at US\$ 4890 million in 2025 and is forecast to a readjusted size of US\$ 6873 million by 2032 with a CAGR of 5.0% during review period.

AMHS software systems refer to the core management and scheduling software platforms used for Automated Material Handling Systems (AMHS) in semiconductor, advanced packaging, flat-panel display, and other smart manufacturing facilities. These systems are responsible for the unified management, task scheduling, path planning, traffic control, equipment monitoring, and data analysis of OHTs (Overhead Hoist Transport), AGVs (Automated Guided Vehicles), RGVs (Rail Guided Vehicles), stockers, lifters, conveyor lines, and other automated logistics equipment, thereby enabling the automated, efficient, and traceable transport of production materials between storage areas, buffer zones, and process equipment.

AMHS software systems have evolved from traditional rule-based scheduling and centralized control into comprehensive logistics management systems that integrate MCS, TCS, OHT control, MES/EAP interfaces, and data analysis platforms. By continuously incorporating technologies such as AI-driven scheduling algorithms, digital twins, the Industrial Internet of Things (IIoT), edge computing, and big data analytics, these systems enable dynamic path planning, multi-vehicle coordinated control, predictive maintenance, traffic congestion optimization, and logistics simulation?thereby enhancing wafer fab logistics efficiency, equipment utilization, and production throughput. Simultaneously, the software architecture is shifting toward modularity, distributed systems, and open interfaces to meet the integration requirements of diverse wafer fabs and equipment vendors.
