Amino-functional siloxane refers to an organosilicon compound in which amino functional groups are introduced into the siloxane backbone. These compounds typically consist of a siloxane backbone (-Si-O-Si-) combined with amino groups (-NH₂ or its derivatives) attached to the side chains. They exhibit the flexibility and heat resistance of siloxanes along with the reactivity of amine groups. Amino-functional siloxanes are widely used in textiles, coatings, sealants, and adhesives, providing excellent adhesion, lubrication, and softness.
