Abstracts

The global Amino Acid Chelated Calcium market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Amino Acid Chelated Calcium is a form of calcium that is chemically bonded to amino acids. Chelation refers to the process of creating a stable complex by binding a metal ion (in this case, calcium) to organic molecules (amino acids) to form a chelate. The amino acids serve as ligands and surround the calcium ion, creating a stable and soluble compound.

Calcium amino acid chelate is commonly used in dietary supplements and medications to provide a source of calcium for individuals who may not obtain sufficient amounts through their regular diet. It is used to prevent or treat low calcium levels in the blood, osteoporosis, osteomalacia, hypoparathyroidism, and other conditions caused by calcium deficiency.

This report studies the global Amino Acid Chelated Calcium production, demand, key manufacturers, and key regions.
